CS7641 A1: Supervised Learning

Scott Schmidl
sschmidl3@gatech.edu

I. Introduction - Dataset Explanation

DT: Pruning Boosting: number of Weak Learners NN: Hidden Layer Size (Width, Depth) SVM: Kernel Type KNN: K

You kinda don't. It would suffice to represent this as a bar chart or, even better, treat different categories as separate learning curves to consider. A good example of a categorical hyperparameter is an SVM kernel, BTW.

II. Decision Trees

Quisque faucibus egestas fermentum. THIS IS WHERE I WILL DISCUSS DECISION TREE CLASSIFIER.

A. Dataset 1

Nulla consequat, tortor sit amet interdum tempus, ante mauris vulputate dui, et bibendum ipsum nisl vitae ante. THIS IS WHERE I WILL DISCUSS DATASET 1.

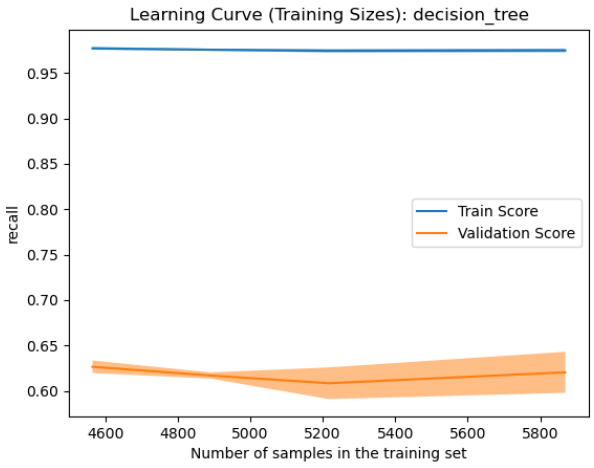

Fig. 1: DT Training Sizes

TESTING HERE

B. Dataset 2

Pellentesque efficitur magna pharetra, molestie libero vel, tempus justo. THIS IS WHERE I WILL DISCUSS DATASET 2.

VII. Conclusion

Quisque faucibus egestas fermentum. Nulla consequat, tortor sit amet interdum tempus, ante mauris vulputate dui, et bibendum ipsum nisl vitae ante. Pellentesque efficitur magna pharetra, molestie libero vel, tempus justo. Pellentesque auctor eros justo, nec cursus ligula porta tincidunt. Nulla pharetra felis ut felis auctor convallis. Morbi porttitor mi neque, at sollicitudin odio imperdiet ut. Praesent in scelerisque mauris.s.
